

Licence-Free UHF Radios

The following was prepared using publicly available information from the Australian Communications & Media Authority (ACMA). It is intended as a guide only and should not be relied on as a substitute for legal advice in individual cases.

There are many UHF radios now sold under the general term of “licence-free.” Although these do not require the user to obtain an individual licence, they are far from being “licence-free.”

CBRS Class Licence

ALL of the “licence-free” UHF radios sold in Australia operate on the UHF Citizen Band Radio Service (CB). This includes both hand-held and mobile UHF sets using 40 or 80 channels. This is one of two CB bands utilised in Australia.

Although you don’t need to apply and pay for an individual licence to use these radios (on either band), they are governed by what is called a “Class Licence.” The Australian Communications & Media Authority (ACMA) define a Class Licence as:

“A class licence sets out the conditions under which any person is permitted to operate. It is not issued to an individual user, and does not involve licence fees.”

The CBRS Class Licence governs the use of all CB equipment in Australia, including the many “licence-free” UHF radios. The Class Licence sets out many things about how these radios can be used, including certain channels that have been reserved for specific uses.

Communicators / “Toy” Radios

There are a number of often cheap hand-held radios purchased by parents for their children to use to talk to friends, or for the family to use as they travel on holiday. These are sold under various names, such as:

- UHF Communicator
- UHF Licence-Free Radio

These radios will usually have 80 channels and will sometimes also be advertised as having “38 sub-channels” or “privacy tones”. Some will also have “range extender” function. These are all CB equipment operating on the UHF CB band.

This also means that parents buying these sets for their children need to be careful that the children know not to talk to anyone they don’t know, and not to discuss details of their plans over the radio, as anyone close by with a UHF CB can not only hear but can also talk to them.

Legally Designated Channels

Under the CBRS Class Licence the following channels have been designated for the indicated use:

- UHF Band (40 or 80 channels):
 - Channels **5 AND 35**: Emergencies only.
 - Channel **11**: Call Channel.
 - Channels **22** and **23**: Data only (no voice permitted).
 - Channel **40**: Road Channel (Not legally designated but generally accepted).
 - Channels 1 to 8, 31 to 38, 41 to 48 & 71 to 78: used by Repeaters.
- 27MHz or HF Band (40 or 23 channels):
 - Channel **9**: Emergencies only.
 - Channel **11**: Call Channel for AM mode.
 - Channel **16**: Call Channel for SSB mode (LSB).
 - Channel **8**: Road Channel (Not legally designated but generally accepted).
 - Channel 35: Generally accepted LSB long-distance call channel.

Federal Law

These channels are designated under Federal legislation (except for ‘generally accepted’ channels), so they apply throughout Australia. It also means that using these channels for other than the designated purpose can have serious consequences under federal law.

Under the *Radiocommunications Act* operating equipment contrary to the conditions specified in a Class Licence means you are operating “unlicensed” and can therefore be charged with operating an unlicensed device under federal legislation. The penalty for this can be up to **2 years imprisonment** for an individual or **\$469,500** court fine for a corporation, or in minor cases a \$626 on-the-spot penalty notice (i.e. fine).*

If the transmissions cause interference to an emergency call (especially on one of the legally designated emergency channels) the penalties increase to up to **\$1,565,000** court fine or **5 years prison**. There is no option for a penalty notice for these cases; it must be dealt with by a court.*

If you wish to view the CB Class Licence you can find it online – search for “**Radiocommunications (Citizen Band Radio Stations) Class Licence 2015**”.

More Information

More information on the CBRS Class Licence and the legally designated channels can be found at:
